WINDOWS EVENT LOG ANALYSIS SUMMARY

=====

| Event ID | Count | Description                   | Severity           |
|----------|-------|-------------------------------|--------------------|
| 4625     | 5     | Failed logon attempts         | HIGH (brute force) |
| 4624     | 1     | Successful logon              | CRITICAL           |
| 4672     | 1     | Special privileges assigned   | CRITICAL           |
| 4720     | 1     | New user account created      | CRITICAL           |
| 4724     | 1     | Password reset                | HIGH               |
| 4688     | 2     | New process created           | ALERT              |
| 4732     | 1     | Added to Administrators group | CRITICAL           |
| 7045     | 2     | Service installed             | CRITICAL           |

Attacker Activity Chain:

1. Brute force login (4625 x5 -> 4624 success)
2. Privilege escalation (4672)
3. Backdoor account created (4720 + 4724 + 4732)
4. Malware downloaded (4688 -> curl)
5. Persistence via service install (7045 x2)
