[Ingesting /var/log/auth.log into Splunk...]

kali@kali:~\$

```
sudo /opt/splunk/bin/splunk add oneshot /var/log/auth.log -index main -sourcetype linux_auth
Input has been processed successfully.
```

[Running SPL query for brute force detection...]

kali@kali:~\$

```
splunk search 'index=main sourcetype=linux_auth "Failed password" | stats count as failures
```

src_ip	failures
45.33.128.210	13

kali@kali: ~/lab-work

kali@kali:~\$

splunk search 'index=main sourcetype=linux_auth "Failed password" | bin _time span=1m | s

src_ip	_time	count
45.33.128.210	2025-08-28T10:22:00	5
45.33.128.210	2025-08-28T11:18:00	8

kali@kali:~\$

splunk search 'index=main sourcetype=linux_auth "Failed password" | timechart count by s

_time	45.33.128.210	192.168.1.200
2025-08-28T10:22:00	5	0
2025-08-28T11:05:00	0	2
2025-08-28T11:18:00	8	0

=====

SPLUNK BRUTE FORCE DETECTION REPORT

=====

Results:

- 45.33.128.210: 13 failures -> BRUTE FORCE CONFIRMED
- 192.168.1.200: 2 failures -> Below threshold

Timeline:

- Wave 1: 10:22 - 5 attempts (all failed)
- Wave 2: 11:18 - 8 attempts (all failed)
- Success: 10:22:45 - root login from 45.33.128.210

Action: IP 45.33.128.210 flagged for firewall blocking
